# Going Live with Enterprise Solutions TopQuadrant™

## Reference Data Management in TopBraid EDG

Irene Polikoff and Jack Spivak, TopQuadrant Inc.

February 23, 2017

Today's Program

#### Reference Data Management in TopBraid EDG

- Value of RDM and Implementation Approach
- DEMO:
   EDG Reference Data Management in Action
- Quick Poll
- Questions and Answers

Jack Spivak

**Irene Polikoff** 

### **TOPQUADRANT COMPANY**

#### FOUNDATION

- TopQuadrant was founded in 2001
- Standards-based approaches to data semantics to enable connections and to avoid silos

#### **MISSION**

Empower people and drive results — by making enterprise information meaningful

#### FOCUS

• Provide comprehensive data governance solutions

### **ENTERPRISE CUSTOMERS**

- What is Reference Data?
- Why does it need to be managed?
- How to get started?
- How does EDG/RDM help?

### What is Reference Data?

### Critical Data with Critical Impact

- Data that *classifies and categorizes* other data used by mission-critical business applications.
- Reference data has major impact from the integrity of business intelligence reports to system integration.

20-50% of the tables in a database are Reference Data

- Estimated to make up 40% to 70% of the data used in financial transactions
- The same table occurs in many different applications
- "Faulty reference data can cause monetary loss to a financial services organization. For example, misidentified products or data mismatching can cause transaction failures."

(CapGemini report: "Reference Data and its Role in Operational Risk Management")

TopQuadrant™

### Reference Data and Master Data Management

#### Reference data is a high value place to start a Master Management initiative

standard definitions exist

**TopQuadrant**<sup>™</sup>

- create policies to use these or provide crosswalks
- data structures are not complex
- strong value proposition

#### External Reference Data

 defined by standards bodies and industry consortiums

#### Internal Reference data

 organization specific codes, department codes, geo regions

Reproduced with permission from Malcolm Chisholm

#### What is Comprehensive Metadata? Data *ABOUT* Reference Data

Metadata captures, communicates and clarifies the meaning of the reference data -- to answer common questions about its use

Confusion, wasted resources and errors result when users can't understand the meaning of codes and how they are used

**TopQuadrant**<sup>™</sup>

For details, see:

http://www.topquadrant.com/products/topbraid-edg-gov-packs/

- How to start? Identifying and cataloging where your reference data is located.
- Benefits of a multi-user RDM solution that enables collaboration among all stakeholders
- Benefits of using canonical reference datasets and industry standards
- Connecting reference data management to broader data governance initiatives and goals

### How is it done? Preparation

#### **TopQuadrant**<sup>™</sup>

✓ *Identify* existing enterprise databases and

✓ *Catalog* the data landscape in TopBraid EDG

2

### **EDG Reference Data Management**

1

Import metadata for enterprise DBs into EDG DataAssets

#### Why?

Interactively explore integrated view of enterprise data structure. Identify Reference Data and where it's used Import discovered reference data into EDG Reference Data sets

#### Why?

Manage, control, govern, centralize distribution 3 Create EDG Crosswalks. Connect to standard reference data. Standard **Enterprise Reference Data Reference Data** Crosswalks

#### Why?

Analyze, Compare, Understand

### Today's TopBraid EDG Demo

#### Use EDG to:

- ✓ Explore Relevant Data Assets
- ✓ Create Reference Data
- ✓ Connect with Standard Occupational Codes

© Copyright 2017 TopQuadrant Inc.

- Import of multiple RD representations
- Metadata Management
- Relationships to connect and enrich reference datasets
- Crosswalk Mappings and Traceability
- Hierarchy Management
- Documents Reference Data Provenance, On boarding and Usage across Enterprise
- Change Management
- Assignment and tracking of tasks
- RDM Notifications
- Reference Data Quality and Validation
- Reference Data Provisioning
- APIs (RESTful and JMS), integration and customization

### Multi-language support

#### Integration with Other Systems

**TopQuadrant**<sup>™</sup>

#### Successful RDM Solutions?

#### *Reference Data Management* + *Data Governance*

 Central Reference Data Management Unit and Reference Data Operating Model

"Governance is needed to assign accountabilities and enforce standard processes that drive up quality"

 Integrated process, methodology, collaboration, and organizational change management ...

Models, methodology, tools and dedicated resources ... **with** the right technology puts the right capabilities in the hands of those who govern and use reference data

### Participant Poll

#### TopBraid EDG/RDM: Summary and Benefits

### TopQuadrant™

#### ✓ Reduce independent maintenance of code tables

Provides a central system where reference data will "live" and be maintained. With this, maintenance activities like adding new codes are done once, not multiple times, reducing authoring time and effort in making changes to reference data.

#### Reduce data quality problems due to coding errors

Allows end users who use reference data (codes) in the process of data entry to better understand their meaning and, as a result, avoid mistakes of using wrong codes.

#### Reduce the cost of designing code tables for databases

Provides a central system database administrators can go to get exports of "codes tables" with all the fields they may need.

#### Reduce data integration issues due to inconsistent codes

When code tables used by different systems are maintained independently, they become inconsistent across the systems. This lack of consistency impacts the ability to integrate data. TopBraid RDM provides an up-to-date source that can be used as input for every code table in every database in the production landscape. Consistency is achieved and integration promoted.

#### ✓ Make informed decisions based on reference data

Enables the right categorization and organization of data in reporting and analytics by providing a place for report writers to go to better understand the meaning of reference data and how it is used across the different systems.
